

Recorder

dictate from any phone anywhere

VS Recorder provides the convenience of call-in dictation at an affordable price.

How does it work?

Up to four telephone lines can plug into the external voice card (right), with a USB cable connecting to the desired host PC. Once the user interface software is installed, you may begin dictating from any phone! When you have finished dictating, the WAVE audio file is saved to a local or network path of your choosing. It is now available for transcription or playback!
